

## Libryroom - Find Books Faster, Easier

This app helps international students navigate unfamiliar library layouts. Search for books by title, author, or keyword, and get real-time availability (physical & online!). Explore an interactive library map to pinpoint book locations and save time on your research journey.

## Problem Statement

- **Unfamiliar Layouts:** Library layouts can vary significantly between countries. International students may not be accustomed to the specific organization system used in their new library, making it difficult to find books based on their prior experiences.
- **Limited Kiosk Information:** Library kiosks typically only provide basic location information, such as the floor and general section where a book is shelved. This can be insufficient for international students who may be unfamiliar with the library's layout or designation systems.
- **Difficulty Remembering Details:** Even after finding the correct floor and section, students might struggle to recall the specific aisle or shelf location of a particular book. This can lead to wasted time and frustration, especially for students under pressure to find resources for their studies.

## Proposed Solution

- **Improved Search Functionality:** Allow users to search for books by title, author, or keyword, regardless of physical location within the library.
- **Interactive Library Map:** Integrate a digital map of the library that highlights relevant sections and aisles for each book.
- **Availability Information:** Display real-time availability of physical and online versions of the book.

## Design Process

| Discover        | Define                     | Design                                    | Evaluate                                     |

## User Interviews

20+ users were participated in the face to face interviews.

70% of the users visit library in their daily basis.

55% of the users mainly visit library to get reference for their projects and the assesments.

50% of the users, find it difficult to the find the right books in the library.

after the prototypes were shown to the users, few questions were asked for the improvements of the prototypes.

80% of the users found it easier with the prototypes

65% addresses those problems that they faced before.

## Persona

### Average users

“I check books when Exams are coming”

**Bio**  
He is a Student in the Leicester University. He is a library user not often but visits library to refer for the assessments and coursework he faced many difficulties to reach the location of the book.

- Pain Points**
- I was not able to understand the location info
  - Difficulties while going on the location
  - Searching zone
  - Time consuming
  - Forgets the aisle number

- Goals**
- Easy navigation to book can help saving time
  - Using mobile application make the job easier
  - Aisle are hard to find
  - Real time book cover will make the book easier to find.

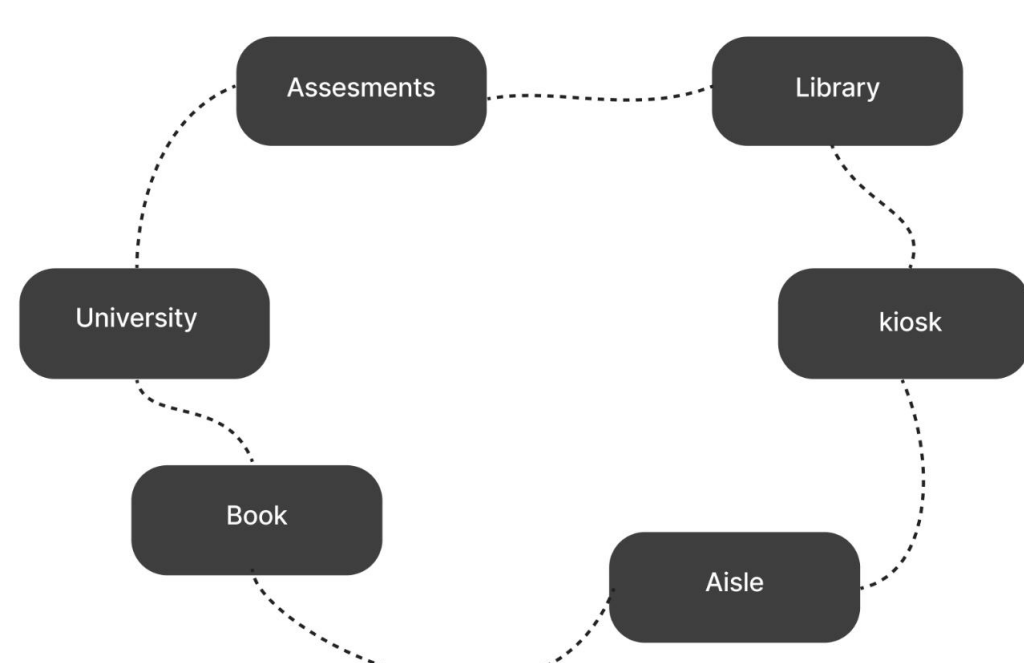

**Personality**

Introvert ————— Extrovert

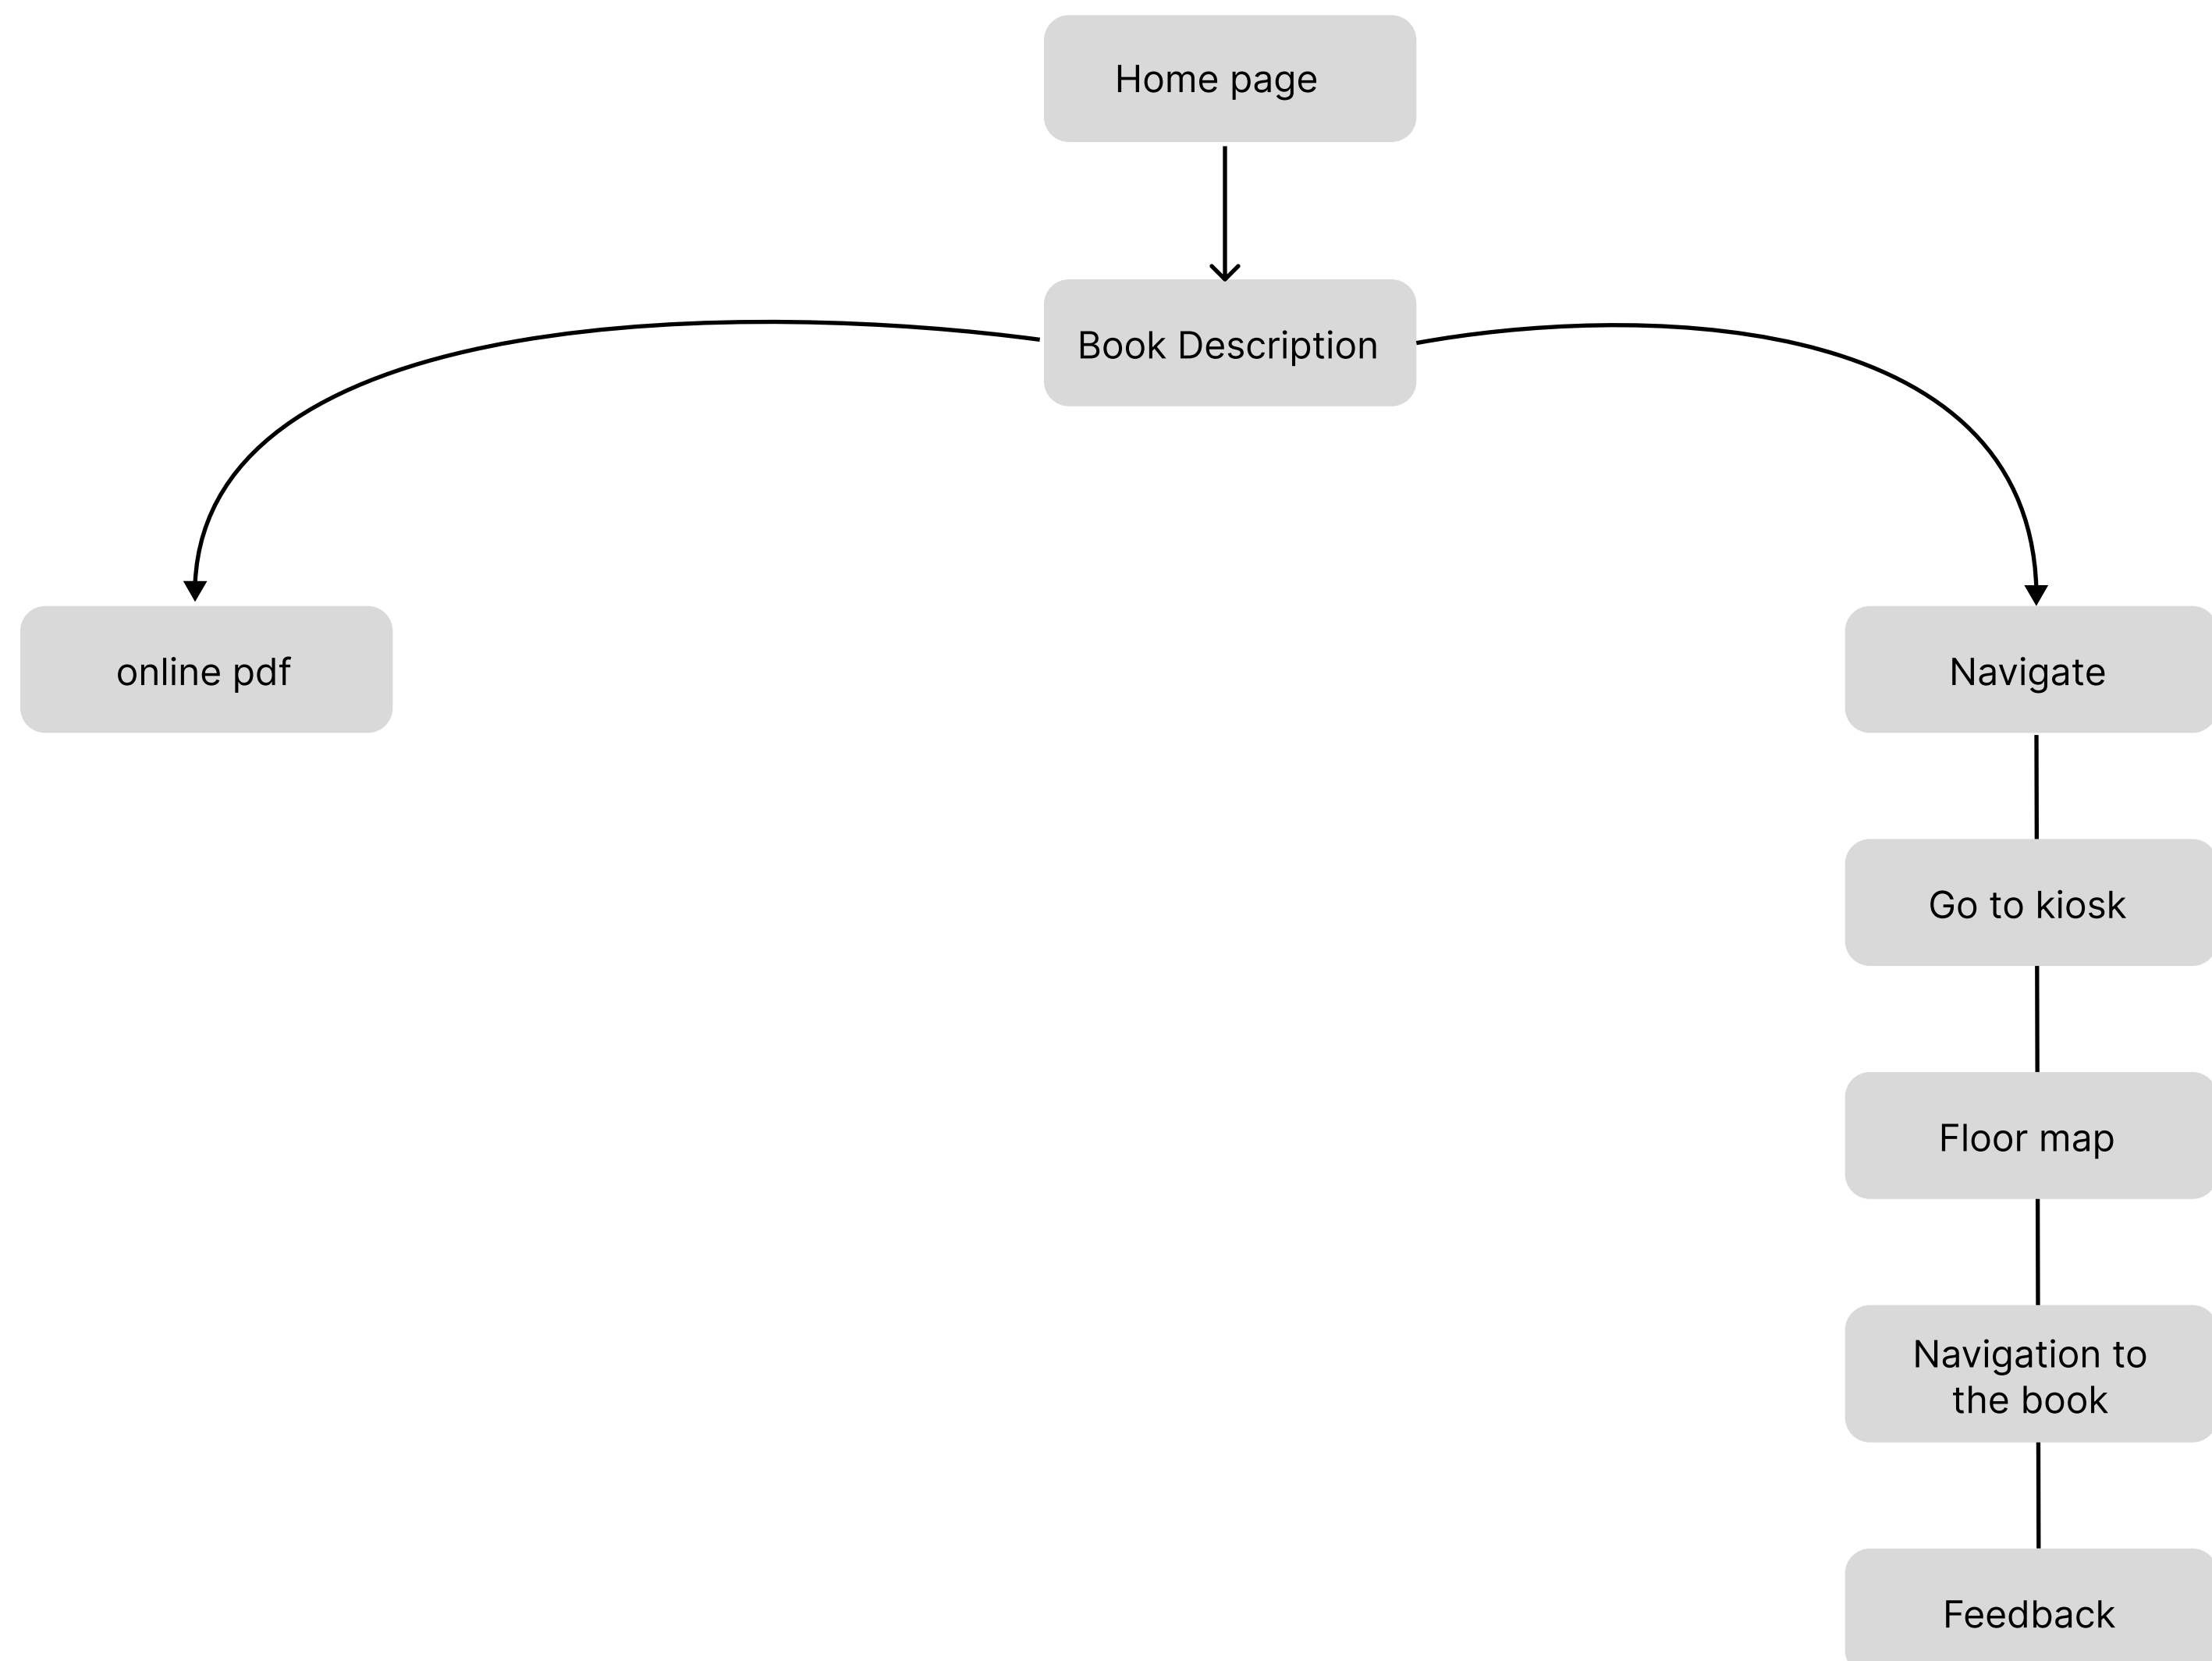

Time saving ————— Careless

Organized ————— Easy going

Daily Routine
